

Baumann™ 51000 Series High Pressure Low Flow Control Valves

The unique 51000 series control valve is optimally designed for demanding low flow, high pressure control applications often found in laboratories and pilot plants. Assemblies, 1/4 inch or 1/2 inch in size, come standard in either investment cast stainless steel or N10276 nickel alloy. Constructions with other high nickel alloys are available.

With a small footprint, less than 10 inches tall, and multiple trim capacity reductions available to meet changing process requirements, the 51000 is a perfect fit where space is at a premium and flexibility is a must. Suited for demanding control of gases, chemical/dye injection and acid/caustic solutions in paper production, textiles, specialty chemicals and many other industries.

FEATURES:

- Compact Size
- Suitable for sticky fluids and corrosive atmospheres
- Quick Trim Change Out - Matched trims not required
- Investment cast stainless steel body in 1/4" (6.35 mm) and 1/2" (12.7 mm) sizes or barstock N10276 Nickel Alloy. Other alloys available.
- Class VI shutoff with soft seat available. Up to 3000 psig (207 barg) at 100°F (37°C)
- Rugged bolted bonnet design
- Wide flow capacity range. Maximum rated Cv ranges from 0.00013 to 2.5 (0.0002 to 2.16 Kv)
- Corrosion resistant actuator
- Available without positioner for fail open or fail close applications

Figure 6. Soft Seat Cage Assembly

The PTFE ring (3B) surrounds the valve plug (4) to eliminate clearance flow typical of lapped-in metal-to-metal close clearance micro trims. Flow is directed over the valve plug and forced through a single v-notch path as the plug moves above the PTFE ring providing precise and predictable control over its entire travel range. When the v-notch moves below the PTFE ring, CLVI primary shutoff is achieved.

A live loaded metal seat collar (3C) fully retains the PTFE ring (3B). The valve plug (4) seats against the metal collar providing CLIV secondary shutoff. In addition, the fluid process pressure combines with the actuator seating force to form a hydraulic seal within the fully retained PTFE ring (3B). Therefore, the higher the process pressure the tighter the shutoff.

TYPE 16 ACTUATOR

The type 16 actuator is single acting, pneumatic with spring return action. It is a compact, multi-spring actuator with low operating friction. It can be reversed in the field (air to open or air to close) without special tools or additional parts.

Multiple springs determine the bench set; there is no need for a bench set adjustment.

It can be mounted with the TA6000 Transducer, type 3660 pneumatic or 3661 electropneumatic valve positioners, as well as, digital valve controllers.
